

- 1) **Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.**

Ans :

Initialize a repository : `git init`

Stage all files : `git add .`

Commit with a message : `git commit -m "Your message"`

Push to remote repository : `git push origin main`

Pull latest changes : `git pull origin main`

- 2) **What is the difference between git fetch and git pull? Answer in 2 lines.**

Ans :

- **git fetch** downloads the latest changes from the remote repository but does not merge them into your local branch.
- **git pull** downloads the latest changes and automatically merges them into your current local branch.

- 3) **Create a new GitHub repository, push any small text file from your local system, and share the repo link.**

Ans :

<https://github.com/mistrydhruv122515u-eng/Dhruv/blob/master/Assignment/module1/Session1.pdf>

- 4) **What is the difference between a Fork and a Pull Request? Answer in 2 lines.**

Ans :

- **Fork** creates a personal copy of someone else's repository in your GitHub account.
- **Pull Request (PR)** is a request to merge your changes from a fork or branch into another repository or branch.

- 5) **Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used.**

Ans :

`git checkout -b feature-test` → Creates and switches to a new branch named feature-test.

`git add .` → Stages all changed files.

`git commit -m "Added feature test changes"` → Creates a commit on the new branch.

`git checkout main` → Switches back to the main branch.

`git merge feature-test` → Merges the changes from feature-test into main.
